R4V Inter-Agency Coordination Platform for Refugees and Migrants from Venezuela

With the official reopening of the Venezuelan side of the border in February 2022, regular population movements between Brazil and Venezuela resumed to levels observed before the COVID-19 pandemic with an average of 423 new arrivals per day into Brazil. According to R4V estimates validated by federal authorities, 96 per cent of refugees and migrants arriving in Brazil consider it their destination country, while 4 per cent continue their journey further south. A daily average of 138 refugees and migrants from Venezuela with acute needs are expected to enter Brazil throughout 2023, and 67 in the course of 2024, reaching an estimated total population of refugees and migrants from Venezuela of 475,975 by the end of 2024.

Irregular movements remain negligible in Brazil, given the structures and processes available for asylum procedures and residency application, however, the prolonged suspension of documentation services due to the COVID-19 pandemic still affects the capacity of the Brazilian government to renew Brazilian IDs for

refugees and migrants from Venezuela. In line with the trends observed in 2022, spontaneous returns and secondary movements to third countries are foreseen to remain minor in 2023 and 2024.

Although Brazil provides a well-structured humanitarian response, led by the federal government, currently known as Operação Acolhida (Operation Welcome), refugees and migrants from Venezuela still face additional challenges. According to the RMNA, 54 per cent of households reported medical care needs, 50 per cent experience some degree of food insecurity and 28 per cent reported not knowing where they will live in the following month. Moreover, 18 per cent of Venezuelan children are not enrolled in school, and 37 per cent of heads of households earn less than the Brazilian minimum wage. Indigenous refugees and migrants suffer from higher rates of food insecurity; more indigenous children are out of school, and they experience more discrimination than the overall Venezuelan population.

The RMRP 2023-2024 planning for Brazil is based on the assumption that Operation Welcome will continue to be implemented. The main strategic objectives are to:

- Complement and strengthen Operation Welcome's three pillars: border management and documentation; shelter and humanitarian assistance; interiorization¹ and socio-economic integration.
- Promote and facilitate effective access to basic goods and services, including by enhancing the capacities of states and municipalities in the reception of, and in assistance to, refugees and migrants from Venezuela.
- Reinforce the prevention and response to protection risks and incidents, while enhancing access to rights, particularly for the most vulnerable and those with specific needs.
- Promote the socio-economic integration of, and social cohesion between refugees and migrants, and affected host communities by supporting the interiorization and access to decent work and livelihoods, either in the formal labour market or through entrepreneurship, while fostering financial inclusion, and preventing discrimination and xenophobia.

Special attention will be paid to indigenous refugees and migrants from Venezuela across Brazil. The 42 appealing organizations are planning their interventions in 22 of the 26 Brazilian states with a focus on Roraima and Amazonas, the states hosting the largest population of refugees and migrants from Venezuela, and which have a border with Venezuela.

1. The "Interiorization" programme is a national integration strategy of Operation Welcome that enables refugees and migrants from Venezuela living in Roraima state to safely move to other parts of Brazil, so to ease pressure on the northern region and facilitate socio-economic integration. The process is voluntary, free and accessible to those refugees and migrants who obtained a temporary residence or were registered as asylum-seekers.
